纤维缠绕玻璃钢制品的结构特点

Structural characteristics of filament wound glass products

合理的结构层次使得玻璃钢制品具有优异的耐腐蚀性能及高强度的承载性能。泓昊牌玻璃钢制品的结构层次分为：
内衬层（防腐层、防渗层）+结构层+外保护层

- 1. 防腐层：即内表层，由内衬树脂+玻璃纤维表面毡或有机纤维聚酯毡构成，树脂含量 $>90\%$ 。此层气密性好，内表光滑，主要提供制品的防腐蚀、防渗漏、保护防腐层，提高据工况介质不同，层次厚度通常在1-6mm。

● 2. 防渗层：由内衬树脂+无碱玻璃纤维喷射纱或短切毡构成，树脂含量为70-80%。该层主要的作用是防腐蚀、防渗漏、保护防腐层，提高防腐层的抗内压能力。根据工况介质不同，层次厚度通常在1-6mm。

● 3. 结构层：由结构层树脂+无碱玻璃纤维构成，树脂含量为30-40%。此层厚度根据制品的受力情况经科学、合理的优化设计及积累的工程经验确定，并通过微机控制，采用螺旋、环向或加单向布的缠绕成型方法，使得此层具有较高的力学性能，为玻璃钢制品提供抗内、外压力及外部载荷。此层厚度较大时需要多次成型。

● 4. 外保护层：由富树脂层或耐老化胶衣构成，制品在室内可以用富树脂层加入紫外线吸收剂，室外选用耐老化胶衣。主要作用为延缓制品的光氧老化。此层厚度<1mm。

The reasonable structure level makes the glass fiber reinforced plastic products have excellent corrosion resistance and high strength bearing capacity. Wang Hao glass fiber reinforced plastic product structure is divided into: lining layer (anti-corrosion layer, impermeable layer) + structural layer + external protective layer.

●1.anti-corrosion layer: that is, the inner surface, from the lining resin + glass fiber surface felt or organic fiber polyester felt, resin content of 90%. The air tightness of the layer is good, and the inner surface is smooth. This layer thickness is about 1mm.

●2. Impervious layer: from the lining resin + alkali free glass fiber jet yarn or chopped felt, resin content of 70-80%. The main function of this layer is to prevent corrosion, leakage, protect the anti-corrosion layer, improve the anti pressure ability of anti-corrosion layer. According to the working medium, the thickness of the layer is usually 1-6mm.

●3. The structure layer: Composed of structural layer resin and alkali free glass fiber, resin content is 30-40% The thickness of this layer according to the stress situation of the products through the optimization of scientific and reasonable design and accumulated engineering experience, and through the microcomputer control, and adopts spiral hoop or winding method with unidirectional cloth, the mechanical properties of the layer is high, for the internal and external pressure and external loads for glass steel product. When the thickness of the layer is large, it needs to be formed several times.

●4. Outer protective layer: Composed of resin rich layer or anti-aging gel, products can be used with ultraviolet absorbent resin rich layer in the indoor, outdoor use anti-aging gel. The main effect is to delay the aging of products. This layer thickness is 1mm.

玻璃钢烟囱、烟道 FRP chimneys and flue

一、玻璃钢烟囱 FRP chimneys

燃煤热电中燃煤废气经湿法脱硫后，烟气温度会降至50–80°C，但烟气含水率较高，对烟囱的内壁腐蚀较大，同时考虑烟囱在紧急状态下即事故温度会在150–180°C，所以湿法脱硫中烟气排放烟囱具有耐腐蚀、耐高温的特点才能满足要求。

玻璃钢烟囱与传统的耐酸砖-耐酸胶泥，钢—钛合金复合结构（钛合金、镍合金等），钢—不锈钢复合结构，碳钢内衬橡胶、碳钢内涂树脂鳞片等材质的烟囱相比，玻璃钢烟囱具有耐腐蚀性强，造价低，寿命长、强度高，产品可设计性强，长时间不用维修，耐高温性能优良等优点，满足在运行温度50–100°C，短时事故温度150–200°C下长期使用。

The flue gas temperature will be reduced to 50-80 degrees centigrade after the flue gas desulfurization by coal-fired thermal power, but the moisture content of the flue gas is high and the inner wall of the chimney is corroded. At the same time, the chimney is at 150-180 C in the emergency state, so the flue gas emission chimney has the characteristics of corrosion resistance and high temperature resistance in the wet desulphurization.

The FRP chimney and the traditional acid resistant and acid resistant mud, steel and titanium alloy composite structure (titanium alloy, nickel alloy, etc.), steel and stainless steel composite structure, carbon steel lining rubber, carbon steel coated resin scales and other materials, glass steel chimney has strong corrosion resistance, low cost, long life and high strength. It has many advantages, such as strong design, long time maintenance and high temperature resistance. It can be used for 50-100 days at a running temperature and 150-200 hours at a short time.

玻璃钢烟囱直径系列：Φ 2000 ~ Φ 10000，高度：10–240M

FRP chimney diameter : Φ 2000 ~ Φ 10000, height: 10-240M

玻璃钢烟囱的结构形式 The structural form of the FRP chimney

1. 钢结构内套玻璃钢烟囱，适用于排放烟气在100米以内的烟囱，一般为1个钢结构内套1个玻璃钢烟囱，钢支架作为支撑系统。

2. 混凝土内套玻璃钢烟囱。适用于排放烟气在100~240米的内排烟筒，一般为1个混凝土外筒内套1~3个的玻璃钢排烟筒，在混凝土预埋钢结构作为支撑系统。烟囱一般30~50米一段，每段之间增设膨胀节，且每15米设一个导向支撑。

1. Steel structure inner FRP chimney is suitable for the chimney that is less than 100 meters, which is generally made up of 1 FRP chimney in 1 steel structures and the steel support as the supporting system.

2. Concrete inner sleeve FRP chimney. It is suitable for the 100-240 meter inner exhaust pipe, which is usually made of 1-3 FRP chimneys with 1 concrete outer canister, and the concrete preburied steel structure is used as the supporting system. The chimney is usually 30~50 meters in length, and expansion joints are added between each section, and a guide support is set for every 15 meters.

二、玻璃钢烟道 FRP flue

玻璃钢烟道具有优良的耐蚀抗温性，其原理是利用冷却塔中热空气的巨大热量将脱硫后的湿烟气进行抬升，将混合气体抬升到上百米的空中，从而改善地面的环境。玻璃钢烟道一次性制作直径大，可跨越距离长，重量轻的优点，可根据电厂空间的位置，设计成水平、垂直烟道，长期使用温度50~80° C。

The FRP flue has excellent corrosion resistance, the principle of which is to lift the wet flue gas after the desulphurization by the great heat and hot air of the cooling tower, and lift the mixed gas to a hundred meters of air, so as to improve the environment of the ground. The size of the glass steel flue is large in one time, which can span long distance and light weight. It can be designed into a horizontal and vertical flue according to the position of the power plant space, and the temperature is 50-80 °C for a long time.

玻璃钢脱硫塔，喷淋管、阳极管

GFRP desulphurization tower, spray tube and anode tube

玻璃钢脱硫塔具有成本低，耐腐蚀、重量轻等优点，广泛应用于电厂、有色冶炼等行业。

玻璃钢喷淋管具有耐腐蚀，耐磨性能优异，在脱硫塔内与喷嘴连接后喷射石膏浆液，使之与烟气中的二氧化硫等化合物反应达到酸碱中和的效果，达到长期使用温度50–100°C，短时事故温度200°C要求。

玻璃钢阳极管具有导电性强，耐高温，强度高，重量轻，制作、安装时间短，使用寿命长的优点。阳极管规格分为Φ350mm和Φ360mm，长度为5米/根，6米/根。

The FRP desulfurization tower has the advantages of low cost, corrosion resistance and light weight. It is widely used in power plants, nonferrous metals smelting and other industries.

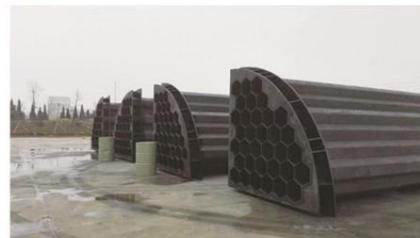

The GFRP spray pipe has corrosion resistance and excellent wear resistance. After connecting with the nozzle in the desulphurization tower, the spray gypsum slurry is ejected to achieve the effect of acid and alkali neutralization with the sulfur dioxide and other compounds in the flue gas, reaching a long-term use temperature of 50-100 °C centigrade and a short accident temperature of 200 °C.

The GFRP anode tube has the advantages of high conductivity, high temperature resistance, high strength, light weight, short manufacture and installation time and long service life. The anode tube specifications into 350mm and Phi Phi 360mm, a length of 6 meters / root.
